

ESRI report highlights persistent poverty

A new [ESRI](#) report highlights persistent poverty and deprivation in Ireland. That's despite an overall decline in poverty rates. The report shows lone parent families and households with a disabled adult are most at risk of income poverty for one year. And while they're also likely to be materially deprived two years in a

July 31, 2025 | 7:27 am That's despite an overall decline in poverty rates. The report shows lone parent families and households with a disabled adult are most at risk of income poverty for one year.

And while they're also likely to be materially deprived two years in a row – LARGE families are MOST at risk of persistent income poverty

It shows poverty is complex, and different groups are vulnerable to different forms and durations of poverty.

It also shows the longer people stay in poverty, the harder it is for them to escape – and highlights the urgent need for policies to protect the most vulnerable from falling into the poverty trap.
